✧ Good evening, Lakshita

Write a beginner-friendly C++ console program that generates funny roast messages.

Requirements:- Ask the user to input their name

- Store at least 10 roast templates using a vector of strings
 - Each template should include a placeholder {name}
 - Randomly select one roast each time the program runs
 - Replace {name} with the actual user input before displaying
 - Ensure different outputs on different runs using proper randomization
 - Handle edge cases like empty input
 - Add clear comments so a beginner can understand the code
- Also ensure the code is clean, readable, and uses standard libraries only.

```
1 // =====
2 // Roast Generator - A Beginner-Friendly C++ Console Program
3 // Asks for your name, then delivers a randomly chosen roast!
4 // =====
5
6 #include <iostream> // For cin / cout (input and output)
7 #include <vector> // For std::vector (to store our roast templates)
8 #include <string> // For std::string (to work with text)
9 #include <cstdlib> // For srand() and rand() (random number generation)
10 #include <ctime> // For time() (used to seed the random generator)
11 #include <algorithm> // For std::transform (to trim whitespace helper)
12
13 // -----
14 // FUNCTION: replacePlaceholder
15 // Purpose : Finds "{name}" inside a template string and
16 // replaces it with the actual user name.
17 // -----
18 std::string replacePlaceholder(const std::string& templateStr,
19                               const std::string& name)
20 {
21     const std::string placeholder = "{name}"; // What we search for
22
23     std::string result = templateStr; // Copy the template
24 }
```

Funny roast message generator in C++

Refactor the code to make it more modular by separating logic into functions.

Viewed a file, created a file, ran a command

Here's what changed and why in the refactor:
The big idea: `main()` now reads like a recipe
The old `main()` did everything — seeding RNG, storing data, reading input, building the roast, and printing it. The new one is just 6 lines of orchestration:

Roast generator - CPP

Copy

```
1 // =====
2 // Roast Generator - Modular Refactor
3 // Each responsibility lives in its own clearly named function.
4 // main() simply orchestrates the flow -- no logic buried there.
5 // =====
6
7 #include <iostream> // std::cin, std::cout
8 #include <vector> // std::vector
9 #include <string> // std::string
10 #include <cstdlib> // srand(), rand()
11 #include <ctime> // time()
12
13
14 // =====
15 // SECTION 1 - UTILITY HELPERS
16 // Small, general-purpose string functions with no side-effects.
17 // =====
18
19 // -----
20 // trimWhitespace
21 // Returns a copy of 'str' with leading/trailing spaces removed.
22 // Example: " Alice " -> "Alice"
23 // -----
24 std::string trimWhitespace(const std::string& str)
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

=====

Welcome to the Roast Generator!

=====

Enter your name (if you dare): Lakshita

Lakshita, you bring everyone so much joy 🌈 especially when you leave the room.

(All in good fun, Lakshita! Have a great day!)

Funny roast message generator in C++

My C++ roast generator is showing weird characters like 🌈 in the output instead of proper punctuation. I think this is an encoding issue. Fix the issue and ensure the output displays normal readable text. Also explain why this problem occurs.

The - (em dash) and ... characters in the roast strings are UTF-8 encoded, but your Windows console is likely using CP1252 or CP437 encoding — so it can't render them, showing garbage like 🌈 instead.

Build this for real with Claude Code

Claude Code can build a prototype you can run, tweak, and launch when it's ready.

Copy

```
1 // =====
2 // Roast Generator - Modular Refactor (Encoding-Safe)
3 // Each responsibility lives in its own clearly named function.
4 // main() simply orchestrates the flow -- no logic buried there.
5 //
6 // ENCODING NOTE:
7 // All strings use plain ASCII only (0x00-0x7F).
8 // No Unicode characters (em dashes, ellipses, smart quotes, etc.)
9 // This guarantees correct output on Windows CMD/PowerShell (CP437,
10 // CP1252), Linux terminals, and macOS -- every environment that
11 // supports basic ASCII, which is all of them.
12 // =====
13
14 #include <iostream> // std::cin, std::cout
15 #include <vector> // std::vector
16 #include <string> // std::string
17 #include <cstdlib> // srand(), rand()
18 #include <ctime> // time()
19
20 // On Windows, include <windows.h> so we can switch the console
21 // code page to UTF-8 (65001) at runtime -- a safe no-op on other
22 // platforms because the #ifdef guard keeps it Windows-only.
23 #ifdef _WIN32
24 #include <windows.h>
```

Funny roast message generator in C++

Enhance my existing C++ roast generator program by adding a fun and engaging console UI.

Requirements:-

- Add a stylish welcome banner using ASCII art
- Include emojis or symbols where appropriate
- Format the output with borders or separators for better readability
- Add a short delay before showing the roast for dramatic effect
- Show a friendly or funny closing message after the roast
- Keep the code beginner-friendly and well-commented
- Do not break the existing functionality (random roast generation and name replacement)

```
